

UNIQUE SOLUTION FOR THE OFFSITE SECTOR PRE-ASSEMBLED FLOOR CASSETTES

Etex Building Performance manufacturers pre-assembled floor cassettes which can be bolted into a structure as a complete unit. This provides a secure platform that can take a load straight away, significantly speeding up the building process.

Manufactured to stringent factory tolerances, our flooring systems can achieve large spans without the need for supporting struts due to steel's unrivalled strength to weight ratio. Space can be maximised and used creatively with complete adaptability on layout, whilst providing cost saving opportunities by reducing the need for steel structural beams.

In addition, building services – plumbing, heating and wiring for instance – can be passed through the lattice web keeping the floor slim and minimising the loss of valuable headroom.

Insulation can also be incorporated at the point of manufacture, driving further efficiency. The acoustic and thermal insulation performance of our systems is industry leading. EOS separating floors are Part E compliant, resisting the passage of sound between floors.

Light gauge steel flooring joists and cassettes offer a real alternative to timber flooring and floor joists, and there is no risk of shrinkage or movement thereby eliminating the risk of 'squeaking floors' or popping nails.
